

Eden — identity kit

MASTER MARK "AJAR" · V1 · SYMBOLS, LOCK-UPS, AND BUILD INSTRUCTIONS

Eden is the master brand above a growing set of worlds — Hidden Village, Magic Academy, Manor, Asylum, Oasis, Desert — each of which keeps its own wordmark and its own genre. The master mark therefore does one job: it says *threshold* without saying *portal*, and it does it in the language the game's interface already speaks — no closed shapes, hairlines that fade, one warm accent, everything blending into the floor.

The mark is a ring — the enclosure holding all the worlds — crossed by a single seam of light. The ring **breaks** where the seam passes through it. That break is the whole idea: the light is not drawn on top of the circle, it is coming through it. A door left open.

Geometry

Drawn on a 100 × 100 unit grid.

Ring: centre 50,50 · radius 34 · stroke 1.5.

Seam: x 53.2, width 1.7, from y 6 to y 94 — it overshoots the ring at both ends and fades to nothing.

Seam is **off-centre by 3.2 units**. Centred, it reads as a diameter; off-centre, it reads as a door.

Ring break: 14 units tall, 9 wide, at each crossing (y 9 and y 77).

Glow: the seam repeated at width 13, opacity .30, Gaussian blur σ 4.

Colour

#12100f

Floor. The only ground the mark sits on.

#f4ece1

Bone. The ring.

#e9a94f

Amber. The seam, and nothing else.

#ffd79a

Seam highlight, upper third only.

Amber is the interface's one accent colour. In the logo it appears on the seam only. If the mark is placed where amber cannot win — a gold or sunlit background — drop to the one-colour build rather than shifting

the hue.

Typography

Wordmark: **Instrument Serif 400**, all caps, letter-spacing .20em horizontal / .30em stacked, with matching left padding so the tracking does not push the word off its optical centre. Cap height $\approx 0.74 \times$ the ring diameter in the horizontal lock-up. Tagline: **Figtree 400**, uppercase, .22em tracking, 11–12px, in #a2958a. Both fonts are already vendored in assets / fonts /; never add a Google Fonts link to the game.

The three symbol builds

Primary

Gradient ring, gradient seam, glow.
Splash screens, key art, store hero.
Minimum 48px.

Solid

Flat bone + flat amber, heavier
stroke. App icon, favicon, sidebar,
world stamps. 16–48px.

One-colour

Ink or bone, seam included. Light
backgrounds, print, greyscale,
embroidery, anything where amber
would vanish.

Lock-ups

Horizontal — the default. Gap between symbol and word = $0.36 \times$ ring diameter. Optically centred on the cap height, not the ring centre.

Stacked — square formats. Store capsules, avatars, loading screens. Tracking opens to .30em; gap = $0.26 \times$ ring diameter.

Symbol alone — 48 / 28 / 16px. Stroke thickens as the mark shrinks, and below 20px the ring break closes: at that size the gap fills in and only muddies the silhouette.

Clear space, minimum sizes, misuse

Clear space is half the ring diameter on all four sides — of the symbol in symbol-only use, of the whole lock-up otherwise. Nothing enters it: no world logo, no store badge, no age rating. **Minimum sizes:** primary build 48px, solid build 16px, horizontal lock-up 120px wide, stacked lock-up 84px wide.

- Never put the mark in a box, badge, rounded square or plate. It sits directly on the floor or on art.
- Never centre the seam, mirror it to the left, or add a second one.
- Never close the ring break in the primary build, and never break it anywhere else.
- Never recolour the seam to a world's colour. Worlds own their wordmarks; Eden stays amber or goes one-colour.
- Never rotate, outline, emboss, or add a drop shadow. The glow is the only effect the mark has.

- Never set the wordmark in Figtree or at default tracking.

On world key art

The symbol alone, solid build, ring at 34–38px, in the corner furthest from the world's own wordmark — bottom-right in every current banner. The word EDEN is not repeated: the world is already named Eden. Choose the treatment by background: **bone ring, amber seam** on dark art (Asylum); **bone ring, bone seam** on mixed art (Manor); **warm white throughout** on hazy light art (Oasis); **ink at 78% opacity** on bright gold art (Desert), where amber would disappear.

Reference SVG — primary build

```
<svg viewBox="0 0 100 100" width="120" height="120" role="img" aria-label="Eden">
  <defs>
    <linearGradient id="edenRing" x1="0" y1="0" x2="0" y2="1">
      <stop offset="0" stop-color="#f4ece1" stop-opacity=".14"/>
      <stop offset=".44" stop-color="#f4ece1" stop-opacity=".86"/>
      <stop offset="1" stop-color="#f4ece1" stop-opacity=".12"/>
    </linearGradient>
    <linearGradient id="edenSeam" x1="0" y1="0" x2="0" y2="1">
      <stop offset="0" stop-color="#e9a94f" stop-opacity="0"/>
      <stop offset=".28" stop-color="#ffd79a"/>
      <stop offset=".74" stop-color="#e9a94f" stop-opacity=".92"/>
      <stop offset="1" stop-color="#e9a94f" stop-opacity="0"/>
    </linearGradient>
    <mask id="edenGap">
      <rect width="100" height="100" fill="#fff"/>
      <rect x="49.6" y="9" width="9" height="14" fill="#000"/>
      <rect x="49.6" y="77" width="9" height="14" fill="#000"/>
    </mask>
    <filter id="edenBlur" x="-60%" y="-40%" width="220%" height="180%">
      <feGaussianBlur stdDeviation="4"/>
    </filter>
  </defs>
  <circle cx="50" cy="50" r="34" fill="none" stroke="url(#edenRing)"
    stroke-width="1.5" mask="url(#edenGap)"/>
  <rect class="eden-glow" x="48.5" y="4" width="13" height="92"
    fill="url(#edenSeam)" opacity=".30" filter="url(#edenBlur)"/>
  <rect x="53.2" y="6" width="1.7" height="88" fill="url(#edenSeam)"/>
</svg>
```

Solid build: drop both gradients, the filter and the glow rect; set the ring stroke to #f4ece1 at width 3.4 and the seam to #e9a94f at x="52.6" width="3.2" y="8" height="84". Under 20px, also drop the mask. One-colour build: both elements take the same ink or bone value.

Build prompt — animated splash screen

Hand the following to a coding agent, together with the reference SVG above and DESIGN_PHILOSOPHY.md.

Build the Eden splash screen for Hero Collector. It is the first thing a player sees on launch, and it must obey DESIGN_PHILOSOPHY.md exactly: no boxes, no borders, every hairline fades before its ends, art is masked into the floor, Instrument Serif for the name, Figtree for everything

else, amber #e9a94f as the only accent.

LAYOUT (express as ratios, not fixed pixels; the reference is 1920×1080)

- Floor #12100f, full bleed. No panel, no container, no vignette box.
- Background key art fills the frame, offset right of centre, masked with radial-gradient(76% 78% at 64% 46%, #000 40%, transparent 88%) and covered by the standard scrim: linear-gradient(to bottom, rgba(18,16,15,.72), transparent 30%, rgba(18,16,15,.4) 62%, #12100f). Until art is commissioned, use a 38deg hatch placeholder at 8% bone with the same mask.
- Lock-up at the left gutter (52px at 1440 wide; ~9% of frame width), optically a little above centre: the horizontal lock-up, ring ~118px, EDEN at 92px / .20em tracking.
- Under it: a rule fading left-to-right from amber to transparent, then the tagline "THE DOOR IS NEVER QUITE CLOSED" – Figtree, 12px, .24em tracking, uppercase, #a2958a.
- Bottom left: the primary action "Continue →" in Instrument Serif 34px amber, on a rule that fades from amber to transparent, with the save state beneath in 12px #6f645c ("Day 14 · four worlds open"). On a fresh save the action reads "Begin →" and the line beneath is the authored empty-state string.

THE OPEN (runs once, on launch)

Sequence, total ~3.7s. The point is that the ring exists BEFORE the light does – the door is being opened, the logo is not "animating in".

1. 0.0-1.4s The ring draws itself. stroke-dasharray 214 (2πr for r=34), stroke-dashoffset 214 → 0, cubic-bezier(.2,.8,.2,1).
2. 1.1-2.7s The seam opens: both seam rects go opacity 0 → 1 with transform: scaleY(.2) → 1 from a 50% 50% origin, same easing. Hold the opacity at 0 for the first 55% of the keyframe so the light arrives late, after the ring closes.
3. 1.5s EDEN rises: opacity 0 → 1, translateY(10px) → 0, 1.1s.
4. 2.0/2.2s Rule, then tagline, same rise, 1.0s each.
5. 2.7s The action block rises.
6. 2.7s on The glow rect alone breathes forever: opacity .26 ↔ .62, 3.4s ease-in-out, infinite. The sharp seam rect does NOT animate – only the blurred copy behind it. This is the one pulsing element on the screen; nothing else may move.

RULES

- Two keyframes only beyond the entrance: the breath above, and nothing else. Do not add particles, parallax, shimmer, or a rotating ring.
- .reduced-motion must kill all of it: mark fully drawn, seam at opacity 1, glow parked at .40, no breath, no entrance.
- The entrance plays once per launch, not per route change. Skip it and jump to the resting state if the player presses any key.
- No web fonts over the network – CSP is default-src 'self'; use the vendored faces in assets/fonts/.

- No src/core/ changes. Save state shown here comes from existing selectors; the headline copy needs an authored fallback for an empty save.
- The screen never scrolls and fits 1440×900 as well as 1920×1080.
- Keep focus styling untouched: outline 3px
color-mix(in srgb, var(--accent) 70%, white), offset 2px, and make "Continue" reachable and activatable by keyboard immediately, even while the entrance is still playing.

CSS you can lift directly:

```
@keyframes edenDraw { from { stroke-dashoffset: 214 } to { stroke-dashoffset: 0 } }
@keyframes edenSeam { 0% { opacity:0; transform: scaleY(.2) }
                      55% { opacity:0 }
                      100% { opacity:1; transform: scaleY(1) } }
@keyframes edenBreath { 0%,100% { opacity:.26 } 50% { opacity:.62 } }
@keyframes edenRise { 0% { opacity:0; transform: translateY(10px) }
                     100% { opacity:1; transform: translateY(0) } }
```

Deliver it as the launch route, with the resting state reachable directly for screenshots.
